

# Vue3-Project

---

This template should help get you started developing with Vue 3 in Vite.

## Recommended IDE Setup

[VSCode](#) + [Volar](#) (and disable Vetur).

## Type Support for `.vue` Imports in TS

TypeScript cannot handle type information for `.vue` imports by default, so we replace the `tsc` CLI with `vue-tsc` for type checking. In editors, we need [Volar](#) to make the TypeScript language service aware of `.vue` types.

## Customize configuration

See [Vite Configuration Reference](#).

## Project Setup

```
npm install
```

## Compile and Hot-Reload for Development

```
npm run dev
```

## Type-Check, Compile and Minify for Production

```
npm run build
```

## Run Unit Tests with [Vitest](#)

```
npm run test:unit
```
